

## Chair and Office Components

### PRODUCT RELEASE - C

**Issue:** 002  
**Date:** 21<sup>st</sup> of January 2010

**Catalogue Section:** Chair Components  
**Product Manager:** Steve Perry

**Subject:** Gemini Nylon Base

Ladies and Gentlemen,

This product release is on the new "Gemini" series nylon chair base.

The Gemini base is available in 3 sizes, 600mm, 640mm and 700mm diameter, but is currently in stock in 600mm and 640mm diameters. The main difference with this base is the low profile flat leg design and double ribs which extend the full length under the leg finishing off flush with the bottom of the centre cone. This design is to give the base added strength and durability. Along with the fitment of a metal taper ring to eliminate any gas lift creep thru the base.

The other main feature of the Gemini base is it is fitted with 60mm diameter cylinder castors

60mm chair castors are becoming more and more popular on office chairs for several reasons but the main reason is for the better rolling properties over soft carpet or deep loop pile carpeted floors. Larger castors also offer a better appearance to many bases as well as giving better clearance between the bottom of the gas action and the floor.

Designed to suit any of our gas actions, except the 85mm extensions, the most suitable for a task chair will be the 655.40443.358 being that if required to meet the AFRDI standards the seat height at its lowest point must be  $\leq 420\text{mm}$ , using the 655.40443.358 gas action the lowest point will be approximately 415mm.
