

Chair and Office Components

PRODUCT RELEASE - C

Issue: 003
Date: 3rd February 2010

Catalogue Section: Chair Packages
Product Manager: Steve Perry

Subject: Orion Chair

Orion

Ladies and Gentlemen,

I am pleased to announce the arrival of the 2nd Mesh Backed chair in the Artia Office Chair range.

With a square back shape, sleek looks and simple operation, from the synchronised mechanism, height adjustable arms and adjustable lumbar support, the “Orion” chair is designed to fit neatly into a task or management market segment.

The Synchronised mechanism, which reclines at a ration of 2 to 1 offers the ultimate in support and comfort, whilst keeping the occupant in an ergonomically correct seated position. All seat adjustments are made from a single lever. By lifting the paddle at position **A** this will adjust the gas action and seat height. By rotating the knob forward at position **B** will lock and unlock the

back / seat tilt of the chair. With a total of 4 locking positions from upright to total recline to choose from.

With built in adjustable lumbar support, the “Orion” chair makes this a simple process to move to the occupant’s desired position whilst still seated, simply gliding up or down at position **C** on the chair, will allow the occupant to adjust the lumbar support too precisely where required.

The height adjustable arms also have the ability for the arm pads to move forward or rearward as well as pivot left and right, for greater occupant positioning. Pressing the button at position **D** allows for the height adjustment.

Like the “Venus” chair the “Orion” chair is a boxed fully upholstered chair kit which is ready to assemble. Included in the packaging are all the components, screws and instructions required to assemble the chair.

Starting from the ground and working up are a list of features to be found on the “Orion” chair.

- 60mm diameter unhooded castors for greater rolling properties on soft carpets
- 660mm diameter Peak nylon base
- 100mm stroke gas action
- synchronised tilt mechanism with single lever operation
- 3 way adjustable arm rests with aluminium accents and soft polyurethane arm pads
- glide adjustable lumbar support
- fully upholstered seat
- back upholstered in a high tension mesh fabric
- patented injection moulded back with aluminium accents

With the back being upholstered in a high tension mesh fabric, this allows air to circulate around and through the mesh, adding to long-term comfort by preventing body heat and moisture build-up. The mesh back distributes weight evenly and provides the perfect level of back support by conforming to each individuals back shape, added with the glide adjustable lumbar support and 3 way adjustable arms, the “Orion” chair offers total comfort for all users.

A full 5 year warranty from date of purchase is offered. With full testing and accreditation to the ANSI/BIFMA (American standard for office furniture), the "Orion" chair is a strong, comfortable and well priced office chair, which meets and exceeds the standards of today's tough climate.

Options: also available as an option on the "Orion" chair is a headrest. The headrest is not a separate item which can be fitted to any chair, as there needs to be a fixing point moulded into the back itself to attach the headrest to, so this would need to be looked at as a special buy in each time.
